

400W to 1000W ARM-C Series

Features

- Full range of output power from 400W to 1000W
- Ultra High linearity
- Redundant ready with no external controller required
- Full M&C capability via RS-232 or RS-485
- Forward and Reflected high precision power monitoring
- Input/Output Sample Ports with precision Calibration Charts
- Redundant Systems shipped fully tested
- Infinite VSWR protection with automatic high reflected power shutdown
- Built-in Harmonic Filter
- PFC (Power Factor Correction)
- CE marking

Overview

Advantech Wireless C-Band line of Amplifiers and BUCs are intended for satellite up-link applications. The design of these units is based on Advantech Wireless' proven techniques resulting in high linearity and operating efficiency. Conservative thermal design contributes to the very high MTBF for these units. Full monitor and control is provided via the serial or Ethernet ports. Special features such as automatic over-temperature shutdown and high-reflected power and overdrive protection contribute to a trouble free operation.

The ARM-C series 19" rackmount SSPA/SSPB (BUC) is available in output power ranging from 400W to 1000W. Higher power operation may be provided using external phase combining techniques offering an output power up to 6,000W. Please contact factory for more details.

Advantech Wireless also offers the SUMMITTM and SupphireBluTM modular SSPA systems for either indoor or outdoor applications.

The full set of accessories made available will facilitate the integration of these units in any application.

Options

- 1:1 or 1:2 redundant configuration
- Phase combined systems for higher power
- L-Band input (SSPB/BUC operation)
- 10/100BT Ethernet, WEB Interface,
- SNMP v1, v2, v3 Interface
- CLI
- Very high stability 10 MHz OCXO (BUC)
- Button RF On/Mute for fast emergency
- Audible Alarm and ACO (Audible Cut Off) button

Accesories

- Mounting slides
- Remote M&C panel
- 500W, 1kW, 3kW Waveguide Loads
- W/G Circulators
- W/G Switches

Redundancy

Advantech Wireless C-Band line of Amplifiers and BUCs may be configured to operate in 1:1 or 1:2 redundancy mode. No extra controller is required for the redundancy operation as the built-in controller in each unit provides this function. For 1:1 redundancy operation, in addition to the two units (operating and standby) a special redundancy kit is required. For 1:2 redundancy operation another redundancy kit is needed in addition to the three units. The kits include the waveguide switches, terminations, splitter, interconnecting cable assemblies and mounting frames.

All redundancy systems are delivered fully tested.

Technical Specifications

Table A

Band*	RF Band (GHz)	L-Band Input for BUC (MHz)	LO for BUC (GHz)	Output Power (W)
CS	5.850 - 6.425	950 – 1525	4.900	400 - 1000
сх	5.850 - 6.725	950 – 1825	4.900	400 - 800
CL	4.400 - 5.000	950 – 1550	3.450	400 - 1000
CI	6.725 - 7.025	1225 - 1525	5.500	400 - 1000
СР	6.425 - 6.725	1025 - 1325	5.400	400 - 1000
CR	5.725 - 6. 325	950 – 1750	4.775	400 - 1000

^{*}Other frequency sub-bands are available. Please consult factory.

General Specifications

Operating Frequency	See Table A				
L-Band input (BUC)	See Table A				
Output Power	See Table B				
Gain	See Table B				
Gain adjustment range	20 dB in 0.1 dB steps				
Gain flatness over full band	± 1dB max (SSPA), ±1.5dB max (SSPB)				
Gain slope over 40 MHz	± 0.3 dB max				
Gain variation over temperature	± 1.5 dB max				
Input Impedance and VSWR	50 Ω SSPA VSWR: 1.3:1, isolator on input; SSPB (BUC) VSWR:1.4:1				
Output VSWR	1.25:1, isolator protected from infinit VSWR: power detector/shutdown				
Noise power density	-70 dBm/Hz in Transmit Band,				
,	-150 dBm/Hz in Receive Band (3.40 – 4.20 GHz)				
Spurious at P1dB	-60 dBc max				
Harmonics	-70 dBc @ P1dB,				
AM/PM conversion	2.5°/dB max at P1dB				
Third order intermod (two tones)	-26 dBc at 3 dB total power back-off from rated P1dB				
Group delay	Linear 0.02 nsec/MHz max				
Group delay	Parabolic 0.003 nsec/MHz² max				
	Ripple 1 nsec p-p max				
Residual AM Noise	0 – 10 kHz: -45 dBc max				
Residual AIVI Noise	10 kHz – 500 kHz: -20 (1.25 + log F) dBc max, F = Frequency in kHz				
	500 kHz – 1 MHz: -80 dBc max				
CCDD (BUC)	300 KHZ - 1 WHZ80 dBC HIAX				
SSPB (BUC) Local Oscillator frequency	See table A				
Reference frequency	10 MHz stability ±1-s over temp range ±2 ⁻¹⁰ /day				
Reference frequency	10 MHz Stanijity + L. Over temp range + 2 - 70av
